into studies was sequenced as part of a might curroughque process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular CDNA clone. However, there are artifacts associated with the generation of CDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to callediting including its location includitiers
                                                                                                                                                                                                                                                                                                                                                                                      Prerygota, Neoptera, Endoptery, Itanian, Presy, Neoptera, Endoptery, Prerygota, Neoptera, Endoptery, Differa, Brachycera, Brachycera, Brachycera, Brachycera, Brachycera, L. -!- CATALYTIC ACTIVITY: A PHOSPHOPROTEIN + H(2)O = A PROTEIN + ORTHOPHOSPHATE (THIS ENZYME IS SERINE/THREONINE SPECIFIC).
-!- COFACTOR: BINDS 2 MAGNESIUM OR MANGANESE IONS (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE PP2C FAMILY.

Alternative promoters direct tissue-specific expression of the mouse
protein phosphatase 2cbeta gene.";

Eur. J. Biochem. 263:736-745(1999).

C. - FUNCTION: BUXZME WHITH A BROAD SPECIFICITY.

- TOTALYICA ACTIVITY: A BROAD SPECIFICITY.

- TOTALYICA ACTIVITY: A PHOSPHOPROTEIN + H(2)O = A PROTEIN +
ORTHOPHOSPHATE (THIS ENZYME IS SERINE/THREONINE SPECIFIC).

- COFACTOR: BINDS 2 MACHESIUM OR MANGANESE IONS (BY SIMILARITY).

- COFACTOR: BINDS 2 MACHESIUM OR MANGANESE IONS (BY SIMILARITY).

- ALTERNATIVE PRODUCTS: 5 ISOFORMS; BETA-1 (SHOWN HERE), BETA-2,
BETA-3, BETA-4 AND BETA-5; ARE PRODUCED BY ALTERNATIVE SPLICING.

- ALTERNATIVE PRODUCTS: 5 ISOFORMS; BETA-1 IS EXPRESSED EXCLUSIVELY IN THEIR C-TERMINUS.

- TISSUE SPECIFICITY: BETA-1 IS EXPRESSED UBIQUITOUSLY; BETA-2 IS
EXPRESSED EXCLUSIVELY IN BRAIN AND INTESTINE.

- SIMILARITY: BELONGS TO THE PP2C FAMILY.

Biochem, Biophys. Res. Commun. 207:708-714(1995).

-I - FUNCTION: ENZYME WITH A BROAD SPECIFICITY.

-I - CATALYTIC ACTIVITY: A PHOSPHOPROTEIN + H(2)0 = A PROTEIN +
ORTHOPHOSPHOPTE (FINE ENZYME IS SERINE/THREONINE SPECIFIC).

-I - COFACTOR: BINDS 2 MAGNESIUM OR MANGANESE IONS (BY SIMILARITY).

-I - SUBUNIT: MONOMER (BY SIMILARITY).

-I - ALTERNATIVE PRODUCTS: A NUMBER OF ISOFORMS SUCH AS BETA-1 (SHOWN HERE) AND BETA-MPP ARE PRODUCED BY ALTERNATIVE SPLICING. THEY ONLY DIFFER IN THEIR C-TERMINUS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution,

phosphoprotein phosphatase (EC 3.1.3.16) lA-beta - rat
NyAlternate names: magnesium-dependent protein phosphatase lA; protein serine/threoni
C;Species: Rattus norvegicus (Norway rat)
C;Accession: JC2524
E;Schaefer, K.; Braun, T.
Biochem: Biophys. Res. Commun. 207, 708-714, 1995
A;Title: Monoclonal anti-flag antibodies react with a new isoform of rat Mg2+ depende
A;Reference number: JC2524; MUID:95169115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Molecule type: mRNA

phosphoprotein phosphatase (EC 3.1.3.16) lA - rat
N.Alternate names: protein phosphatase 2C
Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Accession: A32399
R;Tamura, S.; Lynch, K.R.; Larner, J.; Fox, J.; Yasul, A.; Kikuchi, K.; Suzuki, Y.; Tsui
Proc. Natl. Acad. Sci. U.S.A. 86, 1796-1800, 1989
A;Title: Molecular cloning of rat type 2C (IA) protein phosphatase mRNA.
A;Reference number: A32399; MUID:89184515
A;Accession: A32399
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-382 < TAM.
A;Residues: 1-382 < TAM.
A;Cross-references: GB:J04503; NID:9206312; PIDN:AAA41917.1; PID:9206313
C;Superfamily: human phosphoprotein phosphatase lA
C;Keywords: liver; phosphoric monoester hydrolase; serine/threonine-specific phosphatase

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                  US-09-828-302-14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phosphatase that dephosphorylates IREI protein and regulates the unfolded protein response (UPR). The invention provides methods for increasing the secretion of a heterologous protein in a cell by inducing an elevated UPR. This can be achieved by modulating the activity of HACI (or hacA), PTC2/B or IREI in the cell. The cell from which the protein is secreted can be any cell having an UPR, such as mammalian cells, insect cells, yeast and filamentous fungi. The protein of interest can be any secreted protein such as a therapeutic protein or an industrial enzyme, e.g. lipsse, cellulase, endoglucanase-H, protease, carbohydratase, reductase, oxidase, isomerase, transferase, kinase, phosphatase, reductase, oxidase, glucoamylase, lignocellulose hemicellulase, pectinase and ligninase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           į.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121

                                                   The present sequence represents full length human MP-19, which is a serine/threonine phosphatase derived from human placenta. The nucleic acid sequence encodes a human protein phosphatase of the protein serine/threonine phosphatase family and is of the PP2C class which are regulate in the regulation of fatty acid and cholesterol biosynthesis. The MP-19 protein is useful in the treatment of leukaemia, brain, prostate and breast cancer, Alzheimer's, Huntington's or Parkinson's diseases, epilepsy, reproductive disorders and regulation of spermatogenesis or maturation of mammalian germ cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
